

## Low Noise, Blue-Sensitive Silicon Photomultipliers

SensL's C-Series low-light sensors feature an industry-leading low dark-count rate combined with a high PDE that is extended much further into the blue part of the spectrum using a high-volume, P-on-N silicon process. For ultrafast timing applications select C-Series sensors have a fast output that can have a rise time of 300ps and a pulse width of 600ps. The C-Series is available in different sensor sizes (1mm, 3mm and 6mm) and packaged in a variety of formats, including a 4-side tileable surface mount (SMT) package that is compatible with industry standard, lead-free, reflow soldering processes. C-Series sensors are pin-for-pin compatible with the B-Series.

The C-Series Silicon Photomultipliers (SiPM) form a range of high gain, single-photon sensitive, UV-to-visible light sensors. They have performance characteristics similar to a conventional PMT, while benefiting from the practical advantages of solid-state technology: low operating voltage, excellent temperature stability, robustness, compactness, output uniformity, and low cost. For more information on the SensL products, please refer to the website, [www.sensl.com](http://www.sensl.com).

### PERFORMANCE PARAMETERS

Sensor Size	Microcell Size	Parameter <sup>1</sup>	Overvoltage	Min.	Typ.	Max.	Units
1mm	10μ, 20μ, 35μ, 50μ	Breakdown Voltage (Vbr) <sup>3</sup>		24.2		24.7	V
3mm	20μ, 35μ, 50μ						
6mm	35μ						
1mm	10μ, 20μ, 35μ, 50μ	Recommended overvoltage Range (Voltage above Vbr) <sup>2</sup>		1.0		5.0	V
3mm	20μ, 35μ, 50μ						
6mm	35μ						
1mm	10μ, 20μ, 35μ, 50μ	Spectral Range <sup>4</sup>		300		950	nm
3mm	20μ, 35μ, 50μ						
6mm	35μ						
1mm	10μ, 20μ, 35μ, 50μ	Peak Wavelength (λ <sub>p</sub> )			420		nm
3mm	20μ, 35μ, 50μ						
6mm	35μ						

<sup>1</sup> All measurements made at 2.5V overvoltage and 21°C unless otherwise stated.

<sup>2</sup> Please consult the maximum current levels on page 6 when selecting the overvoltage to apply.

<sup>3</sup> The breakdown voltage (Vbr) is defined as the value of the voltage intercept of a straight line fit to a plot of  $\sqrt{I}$  vs  $V$ , where  $I$  is the current and  $V$  is the over-voltage.

<sup>4</sup> The range where PDE >1% at Vbr + 5.0V.

Sensor Size	Microcell Size	Parameter	Overvoltage	Min.	Typ.	Max.	Units
1mm	10μ	PDE <sup>5</sup> at λ <sub>p</sub>	V <sub>br</sub> + 2.5V		14		%
	20μ				24		%
	35μ				31		%
	50μ				35		%
1mm	10μ		V <sub>br</sub> + 5.0V		18		%
	20μ				31		%
	35μ				41		%
	50μ				47		%
3mm	20μ		V <sub>br</sub> + 2.5V		24		%

	50μ				6x10 <sup>6</sup>		
6mm	35μ				3x10 <sup>6</sup>		
1mm	10μ	Dark Current <sup>6</sup>	V <sub>br</sub> + 2.5V		1	3	nA
	20μ				5	16	nA
	35μ				15	49	nA
	50μ				32	102	nA
3mm	20μ				50	142	nA
	35μ				154	443	nA
	50μ				319	914	nA
6mm	35μ				618	1750	nA
1mm	10μ	Dark Count Rate	V <sub>br</sub> + 2.5V		30	96	kHz
	20μ				30	96	kHz
	35μ				30	96	kHz
	50μ				30	96	kHz
3mm	20μ				300	860	kHz
	35μ				300	860	kHz
	50μ				300	860	kHz
6mm	35μ				1200	3400	kHz

<sup>5</sup> Note that the PDE does not contain contributions from afterpulsing or crosstalk.

<sup>6</sup> Dark current derived from dark count data as  $DC \cdot M \cdot q \cdot (1 + CT)$ , where DC is dark count, M is gain, q is the charge of an electron, and CT is cross talk.

Sensor Size	Microcell Size	Parameter	Overvoltage	Min.	Typ.	Max.	Units
1mm	10μ, 20μ, 35μ, 50μ	Rise Time - Fast Output <sup>7</sup>			0.3		ns

## GENERAL PARAMETERS

	1mm	3mm	6mm
	10010, 10020, 10035, 10050	30020, 30035, 30050	60035
Active area	1 x 1 mm <sup>2</sup>	3 x 3 mm <sup>2</sup>	6 x 6 mm <sup>2</sup>
No. of microcells	10010: 2880 10020: 1296 10035: 504 10050: 282	30020: 10998 30035: 4774 30050: 2668	60035: 18980
Microcell fill factor	10010: 28% 10020: 48% 10035: 64% 10050: 72%	30020: 48% 30035: 64% 30050: 72%	60035: 64%

SMT Package Specifics			
	1mm	3mm	6mm
	10010, 10020, 10035, 10050	30020, 30035, 30050	60035
Package dimensions	1.5 x 1.8 mm <sup>2</sup>	4 x 4 mm <sup>2</sup>	7 x 7 mm <sup>2</sup>
Recommended operating temperature range	-40°C to +85°C		
Maximum storage temperature	+105°C		
Soldering conditions	Lead-free, reflow soldering process compatible (MSL 3 for tape & reel quantities; MSL 4 for tape only qty.) See the <a href="#">SMT Handling Tech Note</a> for more details.		
Encapsulant type	Clear transfer molding compound		
Encapsulant refractive Index	1.59 @ 420nm		

X18 Package Specifics (1mm only)			
	1mm	3mm	6mm
	10010, 10020, 10035, 10050	30020, 30035, 30050	60035
Recommended operating temperature range	-40°C to +85°C		
Maximum storage temperature	+125°C		
Soldering conditions	Soldering iron, maximum of 260°C for no more than 10 sec. See the <a href="#">Soldering Tech Note</a> for more details.		

X13 Package Specifics			
	1mm	3mm	6mm
	10035	30035	60035
Recommended operating temperature range	0°C to +40°C		
Maximum storage temperature	+50°C		
Soldering conditions	Soldering iron, max. of 260°C for 5sec, 2mm from ceramic base. See the <a href="#">Soldering Tech Note</a> for more details.		
Encapsulant material	Epoxy		

\* A1 and C1 are package versions. Please consult this [PCN](#) for more information.

An SiPM is formed of a large number (hundreds or thousands) of microcells. Each microcell is an avalanche photodiode with its own quench resistor and a capacitively coupled fast output. These microcells are arranged in a close-packed array with all of the like terminals (e.g. all of the anodes) summed together. The array of microcells can thus be considered as a single photodiode sensor with three terminals: anode, cathode and fast output.

*SensL SiPM component symbol.*

EVALUATION BOARD OPTIONS

SMA BIASING BOARD (MicroFC-SMA-XXXXX)

The MicroFC-SMA is a printed circuit board (PCB) that can facilitate the evaluation of the C-Series SMT sensors. The board has three female SMA connectors for connecting the bias voltage, the standard output from the anode and the fast output signal. The output signals can be connected directly to a 50Ω-terminated oscilloscope for viewing. The biasing and output signal tracks are laid out in such a way as to preserve the fast timing characteristics of the sensor.

The MicroFC-SMA is recommended for users who require a plug-and-play set-up to quickly evaluate C-Series SMT sensors with optimum timing performance. The board also allows the standard output from the anode to be observed at the same time as the fast output. The outputs can be connected directly to the oscilloscope or measurement device, but external preamplification may be required to boost the signal. The table below lists the SMA board connections. The SMA board electrical schematics are available to download in the SMT Board Reference Design document.

Table with 2 columns: Output, Function. Rows include Vbias (positive bias input (cathode)), Fout (fast output), and Sout (standard output (anode)).

PIN ADAPTER (MicroFC-SMTPA-XXXXX)

The SMT Pin Adapter board (SMTPA) is a small PCB board that houses the SMT sensor and has through-hole pins to allow for use with standard sockets or probe clips. This product is useful for those needing a quick way to evaluate the C-Series SMT sensors without the need for specialist surface-mount soldering. While this is a 'quick fix' suitable for many evaluations, it should be noted that the timing performance from this board will not be optimized and if the best possible timing performance is required, the MicroFC-SMA-XXXXX is recommended. The pin-out information is shown in the table below and the C-Series User Manual contains information on biasing the sensor. The SMTPA board electrical schematics are available to download in the SMT Board Reference Design document.

Table with 2 columns: Pin No., Connection. Rows include 1 (anode), 2 (fast output), 3 (cathode), 4 (ground), and 5 (no connect).

### PACKAGE DRAWINGS (All Dimensions in mm)

MicroFC-60035-SMT-C1 \*

\* Please consult the [PCN](#) concerning C-Series SMT parts.

*\*\* The 'No Connect' pin 4 should be soldered to the PCB. This pin can be connected to ground but it can also be left floating without affecting the dark noise. It is recommended that the Pin 5 paddle is NOT soldered to the PCB and is left floating to achieve optimal soldering on pins 1 to 4. Please note the full advice in the CAD file.*

MicroFC-SMA-60035			SMT sensor mounted onto a PCB with SMA connectors for bias and output.	PK
MicroFC-SMTPA-60035			SMT sensor mounted onto a pin adapter board	PK
MicroSC-60035-X13			2-pin ceramic package, epoxy fill (no fast output)	PK

<sup>a</sup> The two-letter delivery option code should be appended to the order number, e.g.) to receive MicroFC-60035-SMT on tape and reel, use MicroFC-60035-SMT-TR. The codes are as follows:

PK = ESD Package

TA = Tape

TR = Tape and Reel

There is a minimum order quantity (MOQ) of 3000 for the tape and reel (TR) option. Quantities less than this are available on tape which will ship according to the table below:

Sensor size	-TA			-TR
	Cut tape (no reel)	Tape loaded onto a generic reel	Tape loaded onto product-specific reel *	Tape and reel MOQ **
1mm	<50	50 < 3000	-	3000
3mm	<50	50 < 2000	2000 < 3000	3000
6mm	<50	50 < 1000	1000 < 3000	3000

\* The CAD for the product-specific tape and reels are given in the product CAD files (see pages 10 - 14).

\*\* The TR option is only available in multiples of the MOQ.
